

A6 card size Waterfall Mechanism

4 x 6 cm square base panels

All measurements taken from base of mechanism marked by a heavy black line in diagrams.

Instructions:

Using measurements specified above, cut out all of the mechanism parts individually.

Score all lines indicated by perforated lines. Slightly flex these lines.

Fold the score line on the back of the mechanism & attach a strip of double sided tape on the face of the fold, and then attach to the reverse of the front part of the mechanism so it is not visible.

Fix a piece of double sided tape where indicated on the anchor mechanism, ensuring it will not over run the edge of the mechanism & thus impede it. Attach it to the grey panel indicated on the base of the front section of the mechanism.

Run a strip of double sided adhesive tape along the top edge on the back of each 6 cm square of card, & beginning at the lowest score line (6 cm) attach a card square JUST below each score line, the final square in line with the top of the mechanism where the front meets the back.

Punch a hole where indicated on the back of the mechanism & feed through some ribbon or fibres etc. to use as a pull cord.
