

Cupcake Pyramid Project

What you will need to create this project:

- 1 x A4 card - white
- 3 x 7 cm scalloped squares - red
- 3 x 6.5 cm scalloped squares - white
- Cupcake decoupage - included

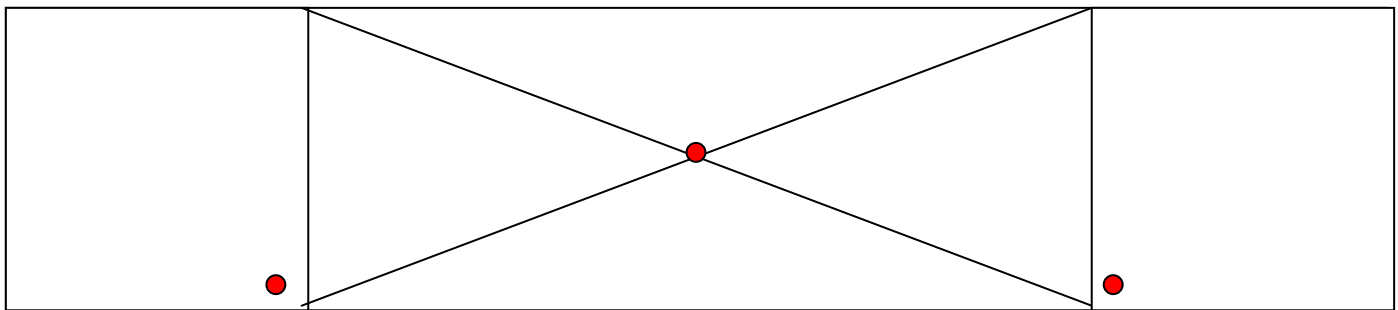

How to assemble this project:

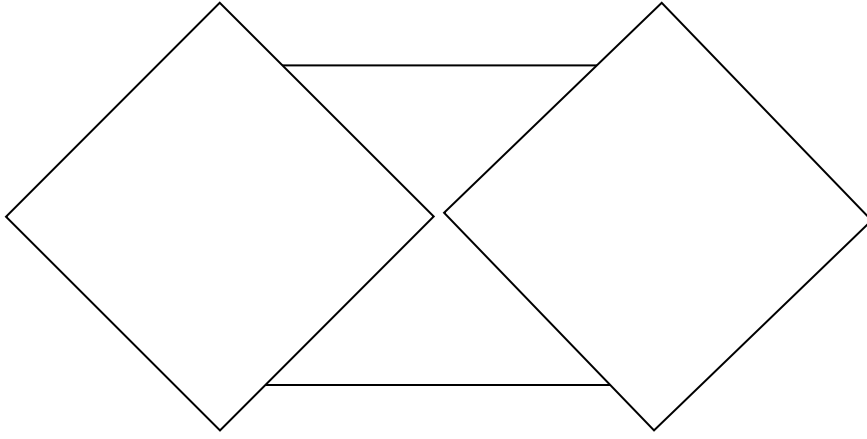

With the A4 card in portrait position, measure & faintly mark the following points both top & bottom: 7.4 & 14.8 cm. Draw in these lines & cut. Put the remaining off-cut away for a future project.

Using the first of the cut strips in landscape position, measure & faintly mark the following points along both the top & the bottom: 7.4 & 22.3 cm. Score in these lines. Then faintly pencil a diagonal line from the top point to the opposing bottom point, repeat in the opposite direction: see diagram below. Fold & firmly crease the scored lines, fold back on the score line & firmly crease once more.

Next, carefully twist the corner marked with a red dot in the diagram, up to meet the centre of the pencilled cross - you need to be accurate with this so take your time & only firm up the crease when you are happy with your positioning. Repeat with the other corner marked with the red dot. Now crease firmly both new folds & rub out the pencil lines carefully.

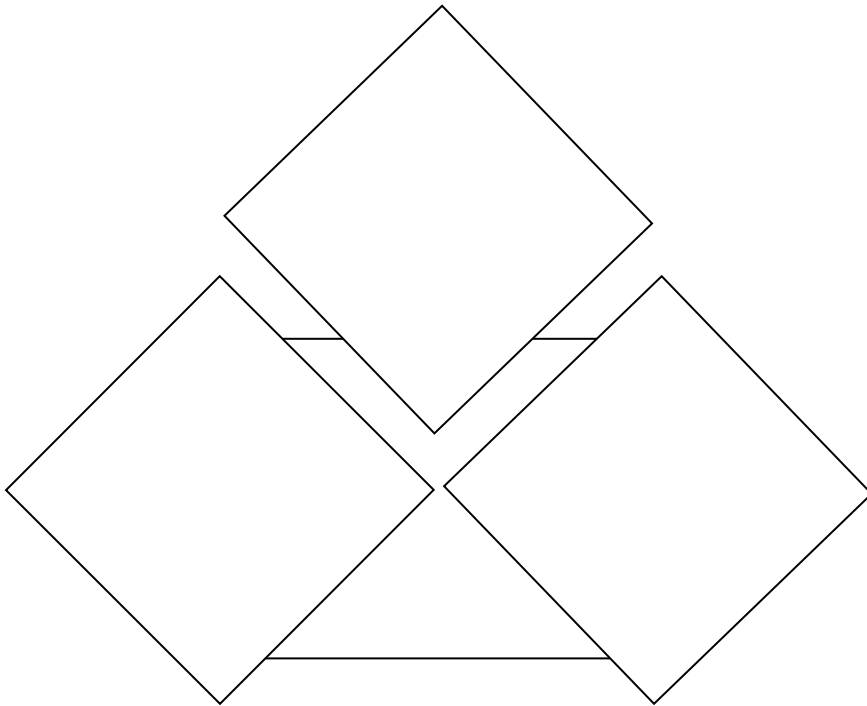

The diagram on top of page two shows how your work should look like after doing these folds.

With the remaining strip in landscape position, measure & mark along both top & bottom at 7.4 & 14.8 cm, draw in the lines & cut out these two squares. Save the scrap for use in the future.

Lay the work down on your work surface & using a wet glue position one of the white squares that you cut earlier at the top of the card as shown in the diagram below.

Turn over the work & fix the second white square directly to the back of the first, to create a more professional position.

Return your work to the face up position & fix the red scalloped squares centrally into position, followed by the white scalloped squares - using the main picture for guidance.

Cut out the 3 decoupage sets at the base of this page - they are all slightly different so keep them together in small piles. Decide which set will decorate which 'diamond' & using 3D adhesive pads or gel glue on all elements, layer up into position.
