The easiest way to use these templates is to print out onto either copier card or printable acetate. Carefully poke holes through this template on the inner line where each of angles meet - 8 in all.

Then repeat on the outer line, but mark every junction - 16 in all.

Position onto the reverse of the card you wish to use and draw around the template, marking each of the holes, remove the template and score between the holes on the inner line to form the central shape, then draw in the outline & cut out. Use the marks you have made through the holes on the template to cut or score the radial lines.

Cut heavy blue lines and score all others.
