

Square Spinner Card Worksheet

You will need a sheet of A3 card for this project, but each sheet will make 2 cards

Instructions:

With an A3 sheet of card in landscape position, measure & mark the central point up both sides at approx. 29.7 cm, draw in this line & cut. Put one half aside for a future project.

With the card still in landscape position, mark the **turquoise** measurements onto your card, followed by the **green** measurements which indicate the top & bottom lines of the square- these measurements are from the base of the card upward. Finally mark in the **red** lines of the square. Carefully cut these red lines, but do not cut through the central panel, as this is the anchor for the square.

Score the **turquoise** perforated lines without scoring the square & then fold as follows:- 14.8 cm back to back; 22.8 cm front to front & 25cm back to back. Once folded the edges of the card should align perfectly.
