

Twisted Easel Circular Duo Template Worksheet

Instructions

Crop 8.7 cm from the height of an A4 card to create a 21 cm square base. Measure & mark top & bottom at 10.5 cm & score in the line.

Cut around the frame of the template & align on to the card so that you have the template right way up, matching card fold line to the top. Use low tack tape to hold in place if you wish.

Using a blunt pencil, heavily draw around the circles & the perforated lines so that they are visible on the card front.

Remove the template.

There are a number of ways to cut the card. You can leave the back as a rectangle, round off just the corners, also cut into the top, or simply cut all around to match the front. Fold on the score lines toward the inside of the card.

Cut out two matching circles either using the template or with a compass set at 5.25 to create a 10.5 cm diameter. You can also cut a third circle & position with 3D pads between the two upright ones to form a stopper as seen in the photograph.
